

PRESS RELEASE

FOR IMMEDIATE RELEASE

FISO TECHNOLOGIES SIGNS AN IMPORTANT CONTRACT WITH SCHLUMBERGER TECHNOLOGY CORPORATION

QUEBEC, QC — February 21, 2006 — FISO Technologies, a subsidiary of Roctest Ltd (TSX: RTT) and a leading manufacturer of high-quality fiber optic sensors and measurement systems for challenging applications, has recently been awarded an important contract by Schlumberger Technology Corporation.

FISO's UMI signal conditioner, FOP pressure sensor and FOT-L temperature sensor will be used for coiled tubing activities, an important segment of the oil and gas market. The challenge lies mainly on integrating the fiber optic sensors within impressive depths and efficiently measuring pressure and temperature, the fundamental parameters to monitor oil fields. Coiled tubing enables relatively complex intervention techniques to be applied safely under live well conditions. It consists of lowering a pipe into the well to perform various operations such as pumping fluids, manipulating downhole tools, running logs and even drilling. As previously mentioned, both pressure and temperature are very important parameters in order to measure the well's characteristics along with the total deliverability of the well.

The UMI signal conditioner allows one single unit for data retrieval of both pressure and temperature and can easily be operated at distance therefore eliminating the necessity of integrating downhole electronics. FISO's fiber optic sensors are a suitable choice as they are intrinsically safe, offer immunity to electromagnetic interference and operate at high temperatures.

According to Francois Pelletier, Vice-President Sales & Marketing at FISO Technologies «This contract is a first major breakthrough for us in the oil & gas market, and clearly demonstrates that FISO's technology is well adapted to this industry. The agreement includes minimal volume purchases to be delivered over the next three years and involves active research and development on our part in order to meet Schlumberger's specifications proper to this application. »

Forward-looking statement

Except for historical information provided herein, the press release may contain information and statements of a forward-looking nature concerning the future performance of the Company. These statements are based on suppositions and uncertainties as well as on management's best possible evaluation of future events, and as such involved a number of risk factors. Such factors may include, without excluding other consideration, risks related to foreign exchange fluctuations, evolution in customer demand for the Company's products and services, the impact of price pressure from competitors and general market trends or economics changes. As a result, readers are advised that actual results may differ from expected results. The Company is not required to update or revise publicly its forward-looking statements.

About FISO Technologies Inc

FISO Technologies Inc. designs, manufactures and markets fiber optic sensors and high-precision measuring instruments for challenging applications in the process control, energy, healthcare and defense markets. Its products are mainly sold internationally. The Company has over 60 employees in Quebec and France.
